

# Pain and ROX

a Rutgers Multicenter Clinical Study

A new test measuring ROX, your blood's Reserve Oxygen supply, is being evaluated to assess pain levels, which may lead to new pain treatments. You may qualify to participate in this research study. We are looking for study subjects with or without chronic disease who:

- Have essentially no pain, and are taking no pain medications, or
- Experience pain, and are on medications that usually work, or
- Experience pain, and are on medications that mostly don't work.

A blood sample of 3-4 ml is needed for this study, to be taken during a visit at one of the centers below. If you are interested in participating in this study, are between 18-89 years old, and are not pregnant, you may qualify. For further information go to:

[www.solmedx.com](http://www.solmedx.com)

click 'Clinical Studies', then 'Pain and ROX'

or contact:

Dr. Sam Sofer, Study Coordinator
